BMW GROUP

DIGITAL EXCELLENCE HUB HACKATHON 2026.

GENAI & MULTI AGENT HACKATHON

WHY THIS MATTERS

The Most Important Asset Is Still People

Not data. Not models. Not tools.

People make the decisions that shape outcomes.

Strong leader

Can recover a failing system

Weak leader

Can destroy a strong system

This is not a technical problem — it is a decision problem.

Our Core Responsibility

Selecting the right people
for the right roles at the right time

- Senior executives
- Leadership-critical roles
- High-impact organizational decisions

High Cost	High Risk	High Impact
of misalignment	of wrong fit	on org outcomes

Getting it right creates leverage
across the entire organization.

CURRENT STATE

The Problem with Today's Decisions

How decisions are made today

- Experience-driven, intuition-heavy
- Biased toward safe ratings (everyone is a 7 or 8)
- Limited scenario simulation
- Hiring fastest available, not best fit
- Over-reliance on past vs. future fit
- Ignoring how leadership combinations interact
- Weak visibility into downstream impact

What this creates

"Good-looking decisions that are not optimal decisions"

Opportunity Cost
The best candidate went elsewhere

Execution Risk
Wrong leader for the context

Cultural Damage
Incompatible leadership combinations

Time Cost
Re-hiring 12–18 months later

AI + DECISION INTELLIGENCE

The Multi-Agent AI Advantage

The Core Principle

AI should not replace
human judgment.

It should augment
decision quality.

- Break complex decisions into components
- Evaluate trade-offs explicitly
- Simulate scenarios before committing
- Make reasoning transparent

Example Multi-Agent Architecture

Instead of:

One model → One answer

We build toward:

JD Agent	Parses & adapts job requirements
CV Agent	Scores & ranks candidates
Scenario Agent	Adjusts priorities per context
Leadership Agent	Profiles leadership traits
Decision Agent	Synthesises final recommendation

BUILD RULES

Hackathon Objective, Tools & Boundaries

What to Build

One strong, focused use case

Clear decision logic

Real working functionality

Multi-agent architecture (not a single prompt)

Modular, explainable reasoning

Build a decision system
that makes sense — not
a flashy demo.

Tools You May Use

Lovable: fast UI prototyping

Agent frameworks (e.g. n8n OpenClaw)

Open-source tools & pipelines

Custom reasoning logic

Any creative combination

You don't just vibe-code
a UI- you build a system
with logic.

Ethical Boundaries

✓ Synthetic / anonymised data

✓ Realistic scenario simulation

✓ Legally compliant pipelines

✗ No Illegal scraping

✗ No personal data without consent

Privacy-respecting and
fully compliant with data
protection law.

PICK ONE. BUILD IT WELL.

Use Cases to Explore

01

Speed vs. Right Hire

Did we hire the best candidate or just the fastest available? Rank candidates, show fit scores & highlight the trade-off.

02

Dynamic JD Adaptation

Job descriptions are static; reality is not. Adapt a JD's priorities to a supply-chain crisis scenario in real time.

03

Leadership Personality Fit

Skills alone don't define leadership success. Match leadership traits to high-risk regional assignment.

04

Scenario-Based Ranking

Rank candidates differently as priorities shift-transformation vs. automotive continuity vs. Amazon experience.

05

Internal vs. External Hire

Evaluate speed, cost, risk, and pipeline strength to recommend the optimal sourcing strategy.

06

Leadership Combination Impact

Leaders don't operate in isolation. Model Production Head + Quality Head pairing effects on outcomes.

07

We have a better idea

Creativity..

Example

Multi-Agent Decision Flow

Demonstrate full agent pipeline: JD Agent → CV Agent → Scenario Agent → Decision Agent output.

WHAT TO DELIVER

Submission & Video Requirements

Submission Checklist

- **Lovable App Link**
  Publicly accessible prototype
- **GitHub Repository**
  Full source code, README included
- **3-Minute Demo Video**
  Follows the structure overleaf
- **Working Execution**
  Runs locally or deployed — not just Lovable
- **Real Functionality**
  Reproducible, explainable, not static

3-Minute Video Structure

0:00–0:20	**Problem** What you built and why it matters
0:20–0:50	**Input** Show real, meaningful inputs
0:50–2:20	**Live Demo** Input → output, ranking, scenario change
2:20–2:50	**AI / Agents** Explain the system logic clearly
2:50–3:00	**Business Value** Why this makes decisions better

HOW YOU WILL BE EVALUATED

Judging Criteria & Final Principles

Scoring Breakdown (Total: 100 pts)

Business Relevance	30 pts
Working Functionality	25 pts
AI & Agent Quality	20 pts
Technical Implementation	10 pts
User Experience	10 pts
Video Clarity	5 pts

⚠ Heavy penalties: Lovable-only demo / no GitHub / no real logic / non-working execution

Build Something That Matters

- **Focused**
- **Working**
- **Logical**
- **Honest**

This is not about showing AI.

This is about improving decisions.

If your tool helps make a better leadership decision — you are solving the right problem.
